

## Gracie Performer stand replacement tips

- Tip replacement is an easy task.
- It is important to note that a white plastic cap is located just under the front pivoting rubber tips.
- The white cap aids in grasping the guitar, which allows the guitar to remain in place during the most aggressive performance.

Use a small scissor to notch the base.

Gently peel away the old tips

- Once the old tips are removed simple press the new rubber tips into place.
- Do not use any lubricant or glue in placement of new tips.
- Use only a clean cotton cloth, lightly moistened with water to clean the rubber tips.
